Put a spinner on your class site

A free, ad-free spin wheel on Google Sites in about two minutes. No sign-up.

The steps

1. **Make your wheel** at freespinthewheel.com/create, or open a ready-made wheel and customize it.
2. **Copy the code.** On your wheel: **Share** > **Embed** tab > pick a size > **Copy embed code**.
3. **Open your page in Google Sites** on a computer and click where the wheel should go.
4. At the right, click **Insert** > **Embed**, then the **Embed code** tab.
5. **Paste**, click **Next** (preview), then **Insert**.
6. **Drag the box** until the whole wheel and the credit line show.
7. Click **Publish** (top right). Open the live page and spin once to check.

Which size?

Size	Use it for
Small 360 x 440	A sidebar or narrow column
Medium 500 x 580	Most class pages
Full width x 640	A page of its own, a projector

All three shrink to fit a phone.

Before you publish names

- [ ] Anyone who can see the page can see the wheel's options.
- [ ] First names, initials or numbers only.
- [ ] Is the site public, or school-only? Ask your tech lead.
- [ ] Checked my school's policy on student names online.
- [ ] Or no names at all: jobs, topics, group numbers.

If it doesn't work

Problem	Fix
Empty box, or "missing its options"	Copy the code again and paste all of it, first <div to last .
Bottom of the wheel cut off	Drag the embed box taller, or pick a smaller size.
Edited the wheel, embed didn't change	The options live in the code. Copy the new code and replace the old one.
Wheel vanishes on save (WordPress)	Your account can't add iframes. Ask the site administrator.

What the embed loads

No ads, no Google Analytics, nothing from other companies, no cookies. One cookie-free visit count on freespinthewheel.com. Please keep the small "Spinner by Free Spin the Wheel" link.
